Good Grad! Careers in Science and Engineering Publications from the Harvard Graduate School of Engineering Engineering Graduate Education and Research Graduate Programs in Engineering & Applied Sciences 2018 Graduate Programs in Engineering & Applied Sciences 2011 (Grad 5) Catalog, 1957-1958 Soothing the Establishment Peterson's Graduate Programs in Engineering & Applied Sciences 2012 Publications from the Harvard Graduate School of Engineering Peterson's Annual Guides to Graduate Study Graduate Programs in Engineering & Applied Sciences 2015 (Grad 5) Peterson's Graduate Programs in Management of Engineering & Technology, Materials Sciences & Engineering, and Mechanical Engineering & Mechanics 2011 Engineering - U [Course Catalog]; Graduate School Of Engineering 1985/1986 Peterson's Graduate Schools in the U.S. 2010 Best Graduate Schools 2017 Softcover Journal of the Graduate School and Faculty of Engineering, University of Tokyo 2020 Pathways The "People Power" Education Superbook: Book 24. Graduate School Guide Engineering Education Peterson's Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources 2012 Graduate Programs in Business, Education, Information Studies, Law & Social Work 2015 (Grad 6) Graduate Schools in the U.S. 2011 Regenerative Engineering The Gourman Report Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources 2011 (Grad 4) Graduate Programs in Business, Education, Information Studies, Law & Social Work 2014 (Grad 6) Graduate Programs in the Humanities, Arts & Social Sciences 2014 (Grad 2) Graduate STEM Education for the 21st Century Peterson's Graduate Programs in Health-Related Professions 2011 The Directory of Graduate Studies Peterson's Graduate Programs in Arts & Architecture 2011 Peterson's Graduate Programs in the Physical Sciences 2011 The Graduate School Mess Peterson's Graduate Programs in the Environmental & Natural Resources 2011 Engineering Education Facilities and Opportunities for Graduate Study in Engineering Crafting Your Research Future Graduate Programs in the Humanities, Arts & Social Sciences 2015 (Grad 2)

When people should go to the book stores, search commencement by shop, shelf by shelf, it is truly problematic. This is why we allow the ebook compilations in this website. It will completely ease you to look guide Uiuc Civil Engineering Graduate School as you such as.

By searching the title, publisher, or authors of guide you in fact want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be every best place within net connections. If you aspiration to download and install the Uiuc Civil Engineering Graduate School, it is utterly easy then, previously currently we extend the join to buy and make bargains to download and install Uiuc Civil Engineering Graduate School correspondingly simple!

Thank you definitely much for downloading Uiuc Civil Engineering Graduate School.Maybe you have knowledge that, people have see numerous time for their favorite books afterward this Uiuc Civil Engineering Graduate School, but end stirring in harmful downloads.

Rather than enjoying a good book behind a mug of coffee in the afternoon, instead they juggled like some harmful virus inside their computer. Uiuc Civil Engineering Graduate School is handy in our digital library an online access to it is set as public as a result you can download it instantly. Our digital library saves in multiple countries, allowing you to get the most less latency era to download any of our books once this one. Merely said, the Uiuc Civil Engineering Graduate School is universally compatible in the manner of any devices to read.

Recognizing the pretentiousness ways to get this ebook Uiuc Civil Engineering Graduate School is additionally useful. You have remained in right site to begin getting this info. get the Uiuc Civil Engineering Graduate School associate that we offer here and check out the link.

You could purchase guide Uiuc Civil Engineering Graduate School or acquire it as soon as feasible. You could speedily download this Uiuc Civil Engineering Graduate School after getting deal. So, as soon as you require the book swiftly, you can straight get it. Its fittingly totally easy and appropriately fats, isnt it? You have to favor to in this freshen

Yeah, reviewing a ebook Uiuc Civil Engineering Graduate School could go to your close contacts listings. This is just one of the solutions for you to be successful. As understood, achievement does not recommend that you have fabulous points.

Comprehending as well as harmony even more than supplementary will find the money for each success. bordering to, the pronouncement as with ease as perspicacity of this Uiuc Civil Engineering Graduate School can be taken as competently as picked to act.

Peterson's Graduate Schools in the U.S. is the "snapshot" paperback version of the hardcover Peterson's Graduate & Professional Programs: An Overview (book one of the six-volume hardcover Grad series). This book includes articles with information on how to finance a graduate education, tips on choosing the right program, and why accreditation is important. It has up-to-date information on hundreds of U.S. institutions that offer master's and doctoral degree programs in a wide range of fields--from accounting to zoology--with facts and figures on enrollment, faculty, computer and library facilities, expenses, and contact information. The program listings are searchable by state or filed and includes an alphabetical school index. Peterson's Graduate Programs in Engineering & Applied Sciences 2015 contains comprehensive profiles of more than 3,850 graduate programs in all relevant disciplines-including aerospace/aeronautical engineering, agricultural engineering & bioengineering, chemical engineering, civil and environmental engineering, computer science and information technology, electrical and computer engineering, industrial engineering, telecommunications, and more. Two-page in-depth descriptions, written by featured institutions, offer complete details on a specific graduate program, school, or department as well as information on faculty research. Comprehensive directories list programs in this volume, as well as others in the Peterson's graduate series. The U.S. system of graduate education in science, technology, engineering, and mathematics (STEM) has served the nation and its science and engineering enterprise extremely well. Over the course of their education, graduate students become involved in advancing the frontiers of discovery, as well as in making significant contributions to the growth of the U.S. economy, its national security, and the health and well-being of its people. However, continuous, dramatic innovations in research methods and technologies, changes in the nature and availability of work, shifts in demographics, and expansions in the scope of occupations needing STEM expertise raise questions about how well the current STEM graduate education system is meeting the full array of 21st century needs. Indeed, recent surveys of employers and graduates and studies of graduate education suggest that many graduate programs do not adequately prepare students to translate their knowledge into impact in multiple careers. Graduate STEM Education for the 21st Century examines the current state of U.S. graduate STEM education. This report explores how the system might best respond to ongoing developments in the conduct of research on evidence-based teaching practices and in the needs and interests of its students and the broader society it seeks to serve. This will be an essential resource for the primary stakeholders in the U.S. STEM enterprise, including federal and state policymakers, public and private funders, institutions of higher education, their administrators and faculty, leaders in business and industry, and the students the system is intended to educate. Evaluate graduate programs in universities and colleges throughout

the United States Peterson's Graduate Programs in the Environment and Natural Resources contains a wealth of information on colleges and universities that offer graduate work in Environmental Management & Policy, Environmental Sciences, Marine Affairs; Fish, Game, & Wildlife Management; Forestry; Natural Resources; Range Science; and Water Resources. The institutions listed include those in the United States, Canada, and abroad that are accredited by U.S. accrediting bodies. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. Peterson's Graduate Programs in the Humanities, Arts & Social Sciences 2015 contains details on more than 11,000 graduate programs of study across all relevant disciplines-including the arts and architecture, communications and media, psychology and counseling, political science and international affairs, economics, and sociology, anthropology, archaeology, and more. Informative data profiles include facts and figures on accreditation, degree requirements, application deadlines and contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate programs, schools, or departments as well as information on faculty research. Comprehensive directories list programs in this volume, as well as others in the graduate series. American graduate education is in disarray. Graduate study in the humanities takes too long and those who succeed face a dismal academic job market. Leonard Cassuto gives practical advice about how faculty can teach and advise students so that they are prepared for the demands of the working worlds they will join, inside and outside the academy. A compact reference provides overviews for nearly one thousand schools in a variety of disciplines, in a resource that features listings by state and field of study as well as up-to-date entries on everything from enrollment and tuition to faculty and degrees offered. Original.

Peterson's Graduate Programs in the Humanities, Arts & Social Sciences 2014 contains comprehensive profiles of more than 11,000 graduate programs in disciplines such as, applied arts & design, area & cultural studies, art & art history, conflict resolution & mediation/peace studies, criminology & forensics, language & literature, psychology & counseling, religious studies, sociology, anthropology, archaeology and more. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, requirements, expenses, financial support, faculty research, and unit head and application contact information. There are helpful links to in-depth descriptions about a specific graduate program or department, faculty members and their research, and more. There are also valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. Are you considering becoming an engineer? Do you know someone who could be? This a great book for them to learn what they are getting into. Engineering offers a life full of fun, excitement, and job satisfaction. However, getting through all the difficult technical courses, dealing with professors who don't know how to talk on a student's level, and the normal hoops of college life can make the path to becoming an engineer quite challenging. I hope to provide readers with an insight to what to expect as an engineering student. Readers can also expect a few tricks of the trade to help them not only survive, but help them thrive as an engineering student. There are hordes of books for students that strive to be medical doctors or lawyers, but there is a lack of literature for the student who wants to become an engineer. This book fills that void. This book focuses on advances made in both materials science and scaffold development techniques, paying close attention to the latest and state-of-the-art research.

Chapters delve into a sweeping variety of specific materials categories, from composite materials to bioactive ceramics, exploring how these materials are specifically designed for regenerative engineering applications. Also included are unique chapters on biologically-derived scaffolding, along with 3D printing technology for regenerative engineering. Features: Covers the latest developments in advanced materials for regenerative engineering and medicine. Each chapter is written by world class researchers in various aspects of this medical technology. Provides unique coverage of biologically derived scaffolding. Includes separate chapter on how 3D printing technology is related to regenerative engineering. Includes extensive references at the end of each chapter to enhance further study.

Graduate Programs in Business, Education, Information Studies, Law & Social Work 2015 contains helpful facts and figures on more than 11,000 graduate programs. The comprehensive directory includes more than 1,850 institutions and their programs in all of the relevant disciplines such as accounting and finance, business management, education, law, library and information sciences, marketing, social work, and many more. Informative data profiles feature facts and figures on accreditation, degree requirements, application deadlines, contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate program, school, or department as well as information on faculty research. Comprehensive directories list programs in this volume, as well as others in the graduate series. *Peterson's Graduate Programs in Arts and Architecture* contains a wealth of information on colleges and universities that offer graduate work in Applied Arts & Design; Architecture; Art & Art History; Comparative & Interdisciplinary Arts; Film, Television, & Video; and Performing Arts. Institutions listed include those in the United States, Canada, and abroad that are accredited by U.S. accrediting agencies. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. *Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources 2012* contains more than 2,900 graduate programs in 59 disciplines-including agriculture and food sciences, astronomy and astrophysics, chemistry, physics, mathematics, environmental sciences and management, natural resources, marine sciences, and more. This guide is part of Peterson's six-volume Annual Guides to Graduate Study, the only annually updated reference work of its kind, provides wide-ranging information on the graduate and professional programs offered by U.S.-accredited colleges and universities in the United States and throughout the world. Informative data profiles for more than 2,900 graduate programs in 59 disciplines, including facts and figures on accreditation, degree requirements, application deadlines and contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate programs, schools, or departments as well as information on faculty research and the college or university. Expert advice on the admissions process, financial support, and accrediting agencies. Comprehensive directories list programs in this volume, as well as others in the graduate series. Up-to-date appendixes list institutional changes since the last addition along with abbreviations used in the guide

A graduate student in the sciences and engineering has to attend conferences, write journal articles, navigate collaborations, negotiate for lab equipment, mediate between squabbling lab mates, indulge eccentric professors, teach undergraduates, and secure funding every semester. Undergrad teaches you none of these skills, and no one warns you before you start grad school that you need them. "Good Grad " is a practical-and politically incorrect-guide for current and future grad students trying to unravel the mysteries of the master's degree and Ph.D. For most of

your time in grad school, you're not worrying about looking good to an admissions committee or beefing up a resume. Instead, you're hoping that you'll get that teaching position next semester so you can pay the rent; you're working late into the night to get that conference abstract submitted before the deadline; you're wondering how to get forms signed when your advisor is out of town; you're hoping you won't have to spend the weekend feeding rats in the lab. "Good Grad " contains the hard-fought wisdom of those who have gone through these trials by fire and come out the other side. For budding scientists and engineers, "Good Grad " is an indispensable resource at every stage of a graduate career, from when you're deciding whether to attend grad school at all to when you're finally defending your thesis, and all the years in between. Table of Contents: Introduction Chapter 1: Going to Grad School Chapter 2: The Milestones of Grad School Chapter 3: Your Advisor Chapter 4: The Research Group Chapter 5: Your Research Chapter 6: Funding Chapter 7: Going to a Conference Chapter 8: Publishing a Journal Article Chapter 9: The Bureaucracy Chapter 10: Getting a Job Epilogue: Social Life This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. Peterson's Graduate Programs in Management of Engineering & Technology, Materials Sciences & Engineering, and Mechanical Engineering & Mechanics contains a wealth of information on colleges and universities that offer graduate work these exciting fields. The institutions listed include those in the United States and Canada, as well as international institutions that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. What is it like to be a researcher or a scientist? For young people, including graduate students and junior faculty members in universities, how can they identify good ideas for research? How do they conduct solid research to verify and realize their new ideas? How can they formulate their ideas and research results into high-quality articles, and publish them in highly competitive journals and conferences? What are effective ways to supervise graduate students so that they can establish themselves quickly in their research careers? In this book, Ling and Yang answer these questions in a step-by-step manner with specific and concrete examples from their first-hand research experience. Table of Contents: Acknowledgments / Preface / Basics of Research / Goals of Ph.D. Research / Getting Started: Finding New Ideas and Organizing Your Plans / Conducting Solid Research / Writing and Publishing Papers / Misconceptions and Tips for Paper Writing / Writing and Defending a Ph.D. Thesis / Life After Ph.D. / Summary / References / Author Biographies Peterson's Graduate Programs in the Physical Sciences contains a wealth of information on colleges and universities that offer graduate work in Astronomy and Astrophysics, Chemistry, Geosciences, Marine Sciences and Oceanography, Meteorology and Atmospheric Sciences, and Physics. The institutions listed include those in the United States, Canada, and abroad that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend

programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. As an added bonus, readers will find a helpful "See Close-Up" link to in-depth program descriptions written by some of these institutions. These Close-Ups offer detailed information about the physical sciences program, faculty members and their research, and links to the program or department's Web site. In addition, there are valuable articles on financial assistance and support at the graduate level and the graduate admissions process, with special advice for international and minority students. Another article discusses important facts about accreditation and provides a current list of accrediting agencies. Peterson's Graduate Programs in Business, Education, Information Studies, Law & Social Work 2014 contains comprehensive profiles of more than 11,000 graduate programs in disciplines such as, accounting & finance, business administration & management, education, human resources, international business, law, library & information studies, marketing, social work, transportation management, and more. Up-to-date info, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable data on degree offerings, professional accreditation, jointly offered degrees, part-time & evening/weekend programs, postbaccalaureate distance degrees, faculty, students, requirements, expenses, financial support, faculty research, and unit head and application contact information. There are helpful links to in-depth descriptions about a specific graduate program or department, faculty members and their research, and more. Also find valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. Peterson's Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment & Natural Resources contains a wealth of information on colleges and universities that offer graduate work in these exciting fields. The institutions listed include those in the United States and Canada, as well international institutions that are accredited by U.S. accrediting bodies. Up-to-date information, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. As science and technology advance, the needs of employers change, and these changes continually reshape the job market for scientists and engineers. Such shifts present challenges for students as they struggle to make well-informed education and career choices. Careers in Science and Engineering offers guidance to students on planning careers—particularly careers in nonacademic settings—and acquiring the education necessary to attain career goals. This booklet is designed for graduate science and engineering students currently in or soon to graduate from a university, as well as undergraduates in their third or fourth year of study who are deciding whether or not to pursue graduate education. The content has been reviewed by a number of student focus groups and an advisory committee that included students and representatives of several disciplinary societies. Careers in Science and Engineering offers advice on not only surviving but also enjoying a science- or engineering-related education and career—how to find out about possible careers to pursue, choose a graduate school, select a research project, work with advisers, balance breadth against specialization, obtain funding, evaluate postdoctoral appointments, build skills, and more. Throughout, Careers in Science and Engineering lists resources and suggests people to interview in order to gather the information and insights needed to make good education and career choices. The booklet also offers profiles of science and engineering professionals in a variety of careers. Careers in Science and Engineering will be important to undergraduate and graduate students who have decided to pursue a career in science and engineering or related areas. It will also be of interest to faculty, counselors, and

education administrators. Back in the day if you got a graduate degree in almost anything, you could get a decent job. Companies and organizations hired people with social science master's degrees because they assumed they could think deep thoughts and express themselves clearly but the mystique of a person with a graduate degree is gone in modern-day society. The internet has made knowledge easily available. The illusion that people with graduate degrees are wise and intelligent is gone because so many people got doctorates who look, talk and act like flakes. I don't respect graduate degrees anymore unless it's in a highly technical field. If you got a Phd in sociology, I'm thinking another bullcrapper thinking they know something when if they really did, they'd know their degree and all that stuff they learned about that fake field called sociology is modern-day crap.

Peterson's Graduate Programs in Engineering & Applied Sciences 2018 contains comprehensive profiles of more than 3,800 graduate programs in all relevant disciplines-including aerospace/aeronautical engineering, agricultural engineering & bioengineering, chemical engineering, civil and environmental engineering, computer science and information technology, electrical and computer engineering, industrial engineering, telecommunications, and more. Informative data profiles for these graduate programs at nearly 800 institutions are included, featuring facts and figures on accreditation, degree requirements, application deadlines, contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on a specific graduate program, school, or department as well as information on faculty research. Comprehensive directories list programs in this volume, as well as others in the *Peterson's graduate series*. A careful analysis of the mixed results for the U.S. of the growing population of these highly-trained, foreign-born, mostly U.S. educated scientists and engineers. On one hand, they are a hard working, skilled population, likely to stay in the U.S. and become citizens after receiving their graduate degrees. On the other, they are more likely to receive U.S. funds for their education than U.S.-born graduate students in these fields, and their presence (as the title suggests) eases pressures on government, corporations and academe to spend more energy encouraging women and minorities to seek careers in these fields. The foreign-born scientists and engineers tend, incidentally, to be paid a little better than their native-born peers, when such factors as age, year of degree, area of specialization, etc. are held constant. The book includes descriptions of the systems through which the foreign-born scientists and engineers flow, including the major gatekeeping roles played by graduate schools, the Educational Testing Service, and by U.S. corporations, and the minor ones played by the U.S. Government. Immigration, educational attainment, occupational and economic data are also presented.

^ABContents: An Overview; A Specialized American Vacuum; The Numbers of Foreign-Born Scientists and Engineers; Characteristics of Foreign-Born Scientists and Engineers; Motivations; Americans' Graduate School Choices; Graduate School Choices of Foreign Students; The Different Levels of Interest in the Life Sciences; The Gatekeepers; The Educational Testing Service; Graduate School Admissions; Getting a Job in the U.S.; The Immigration Process; Roles of Foreign-Born Scientists and Engineers; Overview; The Foreign-Born in Academe; The Foreign Born in Industry: The Older, Larger Pattern; The Foreign Born in Industry: The Newer, More Controversial Pattern; Impacts of Foreign-Born Scientists and Engineers; The Impact on Education; The Impact on Industry; The Impact on U.S. Populations; The Impact of the Foreign Born on Science and U.S. News & World Report's annual Best Graduate Schools book is the "gold standard" guide to U.S. graduate schools, with in-depth rankings, information on careers and trends, and a 160-page directory of MBA programs, medical schools, law schools, and graduate programs in Engineering and Education The current state of engineering graduate study in the United States, its future, and its relationship to research are examined in this report of the National Research Council Committee on the Education and Utilization of the Engineer. The study focuses principally on increasing the supply of highly qualified doctoral recipients who are United States citizens particularly with respect to academic employment. It also gives attention to the importance of master's level work and to the need for access to part-time programs for engineers who are employed full time. Report sections include: (1) an executive summary; (2) the background (reviewing previous reports and studies in engineering education); (3) supply and

demand (providing data on the supply of Ph.D.s and recommendations for increasing the supply); (4) women and minorities in engineering (examining representation patterns); (5) master's degree (presenting findings and recommendations); (6) doctor's degree (with findings and recommendations); (7) nontraditional graduate programs (analyzing existing approaches); (8) engineering faculty (addressing needs for faculty development); and (9) university-industry interactions (discussing conflicting and complementary interests). A list of 66 reference notes is included. (ML) Peterson's Graduate Programs in Engineering & Applied Sciences contains a wealth of information on colleges and universities that offer graduate degrees in the fields of Aerospace/Aeronautical Engineering; Agricultural Engineering & Bioengineering; Architectural Engineering, Biomedical Engineering & Biotechnology; Chemical Engineering; Civil & Environmental Engineering; Computer Science & Information Technology; Electrical & Computer Engineering; Energy & Power engineering; Engineering Design; Engineering Physics; Geological, Mineral/Mining, and Petroleum Engineering; Industrial Engineering; Management of Engineering & Technology; Materials Sciences & Engineering; Mechanical Engineering & Mechanics; Ocean Engineering; Paper & Textile Engineering; and Telecommunications. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. As an added bonus, readers will find a helpful "See Close-Up" link to in-depth program descriptions written by some of these institutions. These Close-Ups offer detailed information about the specific program or department, faculty members and their research, and links to the program Web site. In addition, there are valuable articles on financial assistance and support at the graduate level and the graduate admissions process, with special advice for international and minority students. Another article discusses important facts about accreditation and provides a current list of accrediting agencies. Peterson's Graduate Programs in Business, Education, Health, Information Studies, Law & Social Work contains a wealth of information on colleges and universities that offer graduate work in these fields. Institutions listed include those in the United States, Canada, and abroad that are accredited by U.S. accrediting agencies. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, degree requirements, entrance requirements, expenses, financial support, faculty research, and unit head and application contact information. Readers will find helpful links to in-depth descriptions that offer additional detailed information about a specific program or department, faculty members and their research, and much more. In addition, there are valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies. Peterson's Graduate Programs in Engineering & Applied Sciences 2012 contains a wealth of information on accredited institutions offering graduate degree programs in these fields. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, requirements, expenses, financial support, faculty research, and unit head and application contact information. There are helpful links to in-depth descriptions about a specific graduate program or department, faculty members and their research, and more. There are also valuable articles on financial assistance, the graduate admissions process, advice for international and minority students, and facts about accreditation, with a current list of accrediting agencies.
